**SPECIFICATIONS**

**ANTENNA:**

AM: Air Loop  
FM: Built-In, Transmission Line Type.

**CIRCUIT**

Superheterodyne, using eight miniature tubes and two diodes, and one silicon rectifier.

**TUBE AND DIODE COMPLEMENT:**

- V1 ECC85/6AQ8 (FM RF Amplifier and FM mixer-oscillator)
- V2 6AU6 (1st IF Amplifier)
- V3 6AU6 (2nd IF Amplifier)
- V4 6AL5 (FM Detector)
- V5 6BE6 (AM Converter)
- V6 12AX7 (Left and Right Channel AF Amplifier)
- V7 6GW8 ( Sound Output and Sound Amplifier, Left Channel )
- V8 6GW8 ( Sound Output and Sound Amplifier, Right Channel )
- CR1 Silicon Diode (AFC Diode) Valvo BA102
- CR2 1N541 (AM Detector)
- CR3 93L5-3 (Rectifier, 500 MA)

**CONTROLS:**

Tuning  
On-Off/Treble: (Dual Channel)  
Bass: (Dual Channel)  
Balance: (Dual Channel)  
Loudness: (Dual Channel)  
Function: (AM, FM, FM Stereo (multi), Phono)  
AFC Switch: (On-Off)

**FREQUENCIES:**

RF AM: 535 -1620 KC  
FM: 88-108 MC  
IF AM: 455 KC  
FM: 10.7 MC

**OPERATING VOLTAGE:**

105-120 volts, 60 cycle AC only.

**POWER OUTPUT:**

6.0 Watts total at 10% distortion.

**FREQUENCY RESPONSE:**

40 cycles to 15,000 cycles.

**WATTAGE CONSUMPTION:**

85 watts

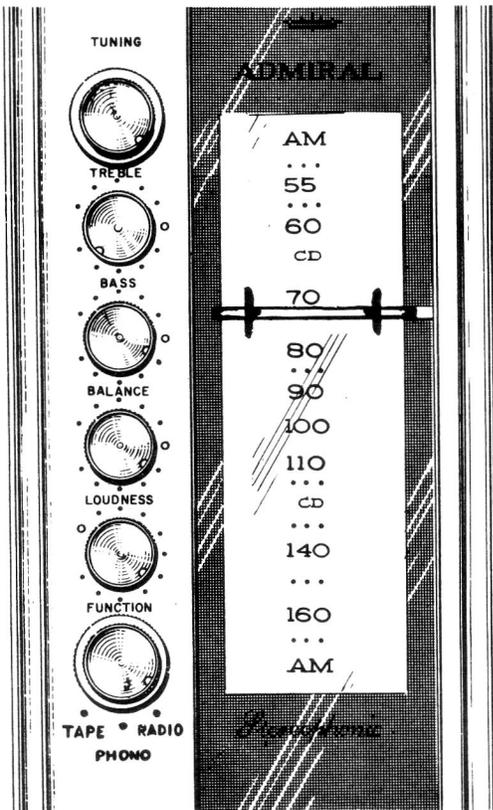

FIG. 1 5Y1CX RUN 5 CONTROL PANEL

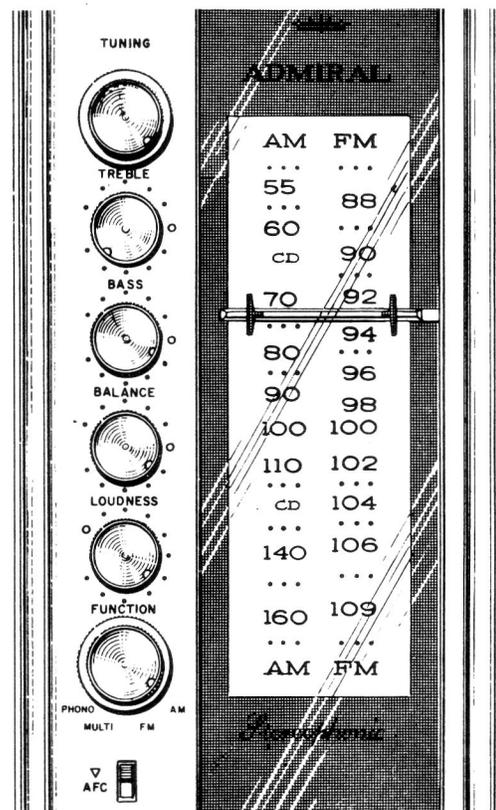

FIG. 2 8Y1CX RUN 5 CONTROL PANEL

### GENERAL

The models included in this manual are combination console models with an FM-AM radio and dual channel stereophonic phonograph with provisions for FM Stereo adapter.

For FM or FM Stereo reception, first tune to the desired station with the AFC switch in the "off" position. Then slide the AFC switch to "on" for drift-free operation.

The Stereo phonograph consists of a four speed automatic record changer with a dual-output cartridge, a dual amplifying system and two separate speaker systems.

### THE FM TUNER

The FM tuner has been designed for better than average sensitivity consistent with good selectivity. Most components are incorporated into an etched circuit board. The entire tuner, including the input IF transformer, is completely encased (shielded).

The tuner employs a dual triode ECC85/6AQ8 tube acting as a RF Amplifier and combined oscillator-mixer.

The 2nd triode of this tuner is Automatic Frequency Controlled by a diode in its grid circuit. AFC is achieved by the voltage developed by the ratio detector being

applied across the special diode CR1. The capacity across this diode varies in proportion to the applied voltage and in turn corrects any frequency drift of the FM oscillator.

It is important to note that in a regenerative type circuit, in this case the RF stage, some form of control is required to prevent the circuit from breaking into oscillations. This is accomplished by feedback from plate to cathode of the RF tube, through trimmer C6. C6 is shown as adjustment "L". See Fig. 19

This tuner is very stable and will seldom need alignment, since it has been carefully aligned at the factory. Complete alignment of the tuner should not be attempted without proper test equipment, using information given in this manual.

**IMPORTANT:** Any misadjustment of the neutralization trimmer C6 may cause extreme oscillations, very distorted reception, weak or no reception at all.

Due to the unique design of this tuner in compactness of size, complete shielding, components mounted on an etched circuit board, etc., any major tuner repairing is not recommended. No parts for the tuner have been shown in the parts list for this reason.

First decide by actual test, if the tuner is defective, then replace with a new one.

## FM TUNER REPLACEMENT

To replace tuner, it is necessary to remove only four Robertson head screws mounting the tuner to the chassis, after first removing all associated components and leads. It is not necessary to remove the dial cord attached to the tuner, as the replacement tuner is supplied with the proper length of cord.

If tuner is replaced, adjust cord tension and check the tuning range. The tuners supplied for replacement have been carefully aligned at the factory before shipment, so that only a touch-up alignment should be needed.

If the set does not tune properly through the FM range (88 MC to 108 MC), first check dial cord tension and correct placement of collar retainers, before deciding on tuner realignment.

To adjust string tension or shift the FM tuning range, loosen collars on the tuning shaft and rotate them until the set tunes through the proper FM range.

If only the ECC85/6AQ8 tube needs replacement, select a tube that will provide the proper tuning range, so that realignment is unnecessary.

## ALIGNMENT PROCEDURE

AM ALIGNMENT FOR 5Y1CX RUN 5 & 8Y1CX RUN 5 CHASSIS TURN FUNCTION SWITCH TO AM POSITION (CCW)				
STEP	CONNECTION OF SIGNAL GENERATOR	SIGNAL GENERATOR FREQUENCY	RECEIVER GANG SETTING	ADJUST
1	Through a .1 mf capacitor to antenna section of tuning gang.	455 KC 30% Mod.	Fully open	M, N, P, & Q for max. on output meter.
2	Use a radiated signal. Loop of several turns of wire, or place generator lead close to antenna loop for adequate signal pickup.	1620 KC 30% Mod.	Fully open	R for max.
3		535 KC 30% Mod.	Fully closed	T for max.
4	Same as Steps 2 & 3	Repeat above two steps until 535-1620 KC range is established.		
5	Same as Steps 2 & 3	1400 KC 30% Mod.	Tune in generator signal	S for max.

**RF AND IF ALIGNMENT FOR 8Y1CX RUN 5 USING AM SIGNAL GENERATOR AND VTVM**

- Allow set and test equipment to warm up for at least 5 minutes before an alignment.
- Turn function switch to FM position (2nd from CCW) AFC switch to OFF. Connect output meter from chassis ground to high side of either "L" or "R" voice coil connection at speaker socket. If speakers are not connected, then connect 3.2 ohm 5 watt load across each speaker channel.
- Before proceeding with alignment, see Step 7.
- Set loudness control to minimum position.
- For IF alignment, inject the 10.7 MC unmodulated signal by means of an ungrounded tube shield atop the RF tube (ECC85).
- For RF alignment, inject signal into antenna terminals as follows: High side of signal generator to bottom screw through a 120 ohm resistor; low side to top screw through a 150 ohm resistor.
- Use the lowest signal input possible to provide a usable reading on the 1.5 volt minus DC scale, except in Step 2. In Step 2, use maximum signal and the zero center scale.
- Use non-metallic alignment tools. Use hex tool (Part No. 98A30-12) for IF transformers and an insulated screw driver type, with a blade no wider than 3/32", for the tuner adjustments.

STEP	SIGNAL GENERATOR CONNECTION	SIGNAL GENERATOR FREQUENCY	RECEIVER DIAL SETTING	VTVM CONNECTION	ADJUST	REMARKS
1	Ungrounded tube shield atop RF tube (ECC85)	10.7 MC Unmod.	High end (Dial fully clockwise)	High side to TP1. See Fig. 9 Ground lead to chassis.	A, B, C, D and E for max.	"E" should be turned inward until the 2nd peak is found.
2	Same as Step 1	10.7 MC Unmod.	Same as Step 1	Move VTVM lead to M/X jack	F for zero center	Use zero center scale on VTVM. Increase signal input to max.
3	Check oscillator range before proceeding. High end, 108.4 MC. Low end, 87.6 MC. Check dial cord for correct tension and placement. To take up slack or shift the tuning range, loosen collars on tuning shaft and rotate to provide tension and proper range.					
4	Antenna terminals through resistors described in paragraph 6 above	108.4 MC (Unmod.)	Same as Step 1	Same as Step 1	G for max.	Only slight adj. will be required.
5	Same as Step 4	94 MC (Unmod.)	Tune in 94 MC on dial	Same as Step 1	J for max.	Repeat steps 5 & 6 until no further increase. Make Step 5 last adjustment.
6	Same as Step 4	90 MC (Unmod.)	Tune in 90 MC on dial	Same as Step 1	K for max.	
7	Before or after alignment, if set has low sensitivity, squeals or howls at any point on the dial, first make certain there are no defective components, then check adjustment of the neutralization trimmer C6 (Adjustment "L"). See Fig. 9 Disconnect antenna, turn volume control to maximum and tune in a station (or point of maximum noise). Turn C6 clockwise until set cuts out, then reverse rotation slightly until station (or noise) is received loud and clear. For improved bandwidth, continue to rotate CCW another fractional turn.

## PARTS LIST FOR 5Y1CX RUN 5 CHASSIS

## MISCELLANEOUS CHASSIS PARTS

Description	Part No.
AM Detector Diode.....	1N541
Clamp (Line Cord to 14E309).....	11B27-3
Plug Button (3/4 diam. hole) (Plastic)..	13B3-18
Chassis Base.....	14E309-2
Rail - Pointer Guide.....	15B2403-1
Bracket - Dial R.H.....	15B2404-1
Bracket - Dial L.H. ....	15B2405-1
Bracket - Dial Mounting.....	15C2406-1
Bracket - Chassis Support.....	15C2407-1
Bracket - Pulley.....	15A2413-1
Shield - Heat .....	15B2437-1
Bracket, Pulley Idler.....	15C2451-1
Bracket - Pointer Carriage (Part of 700C346 Ass'y).....	15C2492-1
Shield - Dial Light.....	15C2493-1
Pulley - Nylon (1).....	17C1-92
Pulley - Nylon (7).....	17C1-93
Drum (Part of 700B340-1 Ass'y).....	17B56-5
Clip, Capacitor Mtg. Snap-In Type.....	18A92-4
Spring - Dial Cord.....	19D1-5
Dial Scale - AM.....	21M10-1
Escutcheon Control Panel (AM).....	23L47-1
Escutcheon - Upper (long).....	23D470-2
Bushing - Tuning (Staked to 14E309),...	27A322-1
Bushing - Drum (Staked to 17B56-5) Part of 700B340-1 Ass'y).....	27A371-1
Shaft, Tuning (Mounted in 27A322-1).....	28A148-1
Screen - Background.....	32B541-1
Amploc Plug.....	33B287-1
Knob - Preference Control.....	33D432-6
Knob - Rear Function Control.....	33D432-8
Knob - Rear Tuning.....	33D432-10
Dial Pointer (Part of 700C346 Ass'y)...	33B484-1
Cord - Dial.....	50A1-3
Plastic Ties.....	50B8-2
Diode Filter Couplate.....	63A3-2
Clip, I.F. Mounting.....	72D28-10
Function Switch.....	77L3-1
Pilot Light Bulb (#1847).....	81B1-19
Shield - Pilot Light.....	82D24-9
Socket - Pilot Light.....	82A42-2
Shield, Tube Tapered, 9 Pin.....	87C7-20
Socket, Tube, Shield Base, 9 Pin.....	87C23-2
Socket - Tube, Min. 9 Pin.....	87B25-1
Socket - Tube, Min. 7 Pin.....	87A39-10
Phono Jack.....	88L5-1
Socket, Speaker, 4 Prong.....	88B5-3
Line Cord (8' Hanked).....	89W1-3
Silicone Diode 500 MA, 800V P.I.V. ...	93L5-3
