General Information

These Models are five-tube a-c/d-c superheterodyne receivers, housed in attractively styled walnut wood cabinets.

ALIGNMENT PROCEDURE

ALIGNMENT FREQUENCIES

IF	460 KC
RF	1500 KC

The location of all trimmers is shown in Fig. 1

PRECAUTION

If the signal generator is AC operated, use an isolating transformer between the power supply and the radio receiver power input. The use of an isolating capacitor is not recommended as AC through the capacitor will introduce hum modulation and/or create the possibility of a burned-out signal generator attenuator.

IF ALIGNMENT

Connect an output meter across the voice coil. Turn the volume control to maximum. Set test oscillator to 460 KC and keep the oscillator output as low as a readable meter reading will permit.

Apply signal to the converter grid through a .05 mfd. capacitor and align progressively the trimmers in the 2nd and 1st IF transformers.

RF ALIGNMENT

Close the gang condenser by rotating the tuning control. Slide the pointer along the cord until it lines up with the first dial marking on the left. Now rotate the tuning control until the pointer is over the 1500 KC dial mark. Apply a 1500 KC signal to the receiver by means of a standard dummy antenna. Align the oscillator trimmer (C-7) to bring in the signal and peak the signal by adjusting the antenna trimmer (C-5). (See Fig. 1 for trimmer locations.)

SPECIAL SERVICE INFORMATION

The following information will be very useful in servicing receivers if a vacuum tube voltmeter or similar voltage measuring instrument is available.

- (1) Stage Gains ♦
 Antenna Post to Converter Grid 3.0 at 1000 KC
 Converter Grid to IF Grid 60 at 460 KC
 IF Amplifier Grid to Diode Plate 45 at 460 KC
 - (2) 0.20-volt, 400-cycle signal across the volume control will produce 1/2 watt speaker output. ♦
 (Volume control turned to maximum).
 - (3) Average DC voltage developed across oscillator grid leak 6 volts
- ♦ Variations of ±20% permissible. All readings obtained with enough signal input to give 1/2-watt speaker output.
